## Amazons New Product to Buy

### Astro

Astro is equipped with a rotating screen that's mounted onto a base with wheels. Amazon designed the robot to appear animated and friendly, with eyes and expressive body movements that respond to user interaction.

The robot can move on its own from room to room and is capable of navigating around objects on the floor or braking to avoid colliding with obstacles such as a pet that moves into its path. A periscope camera attached to the base of the device can be raised or lowered to view objects that are high up.

### About Astro

astro

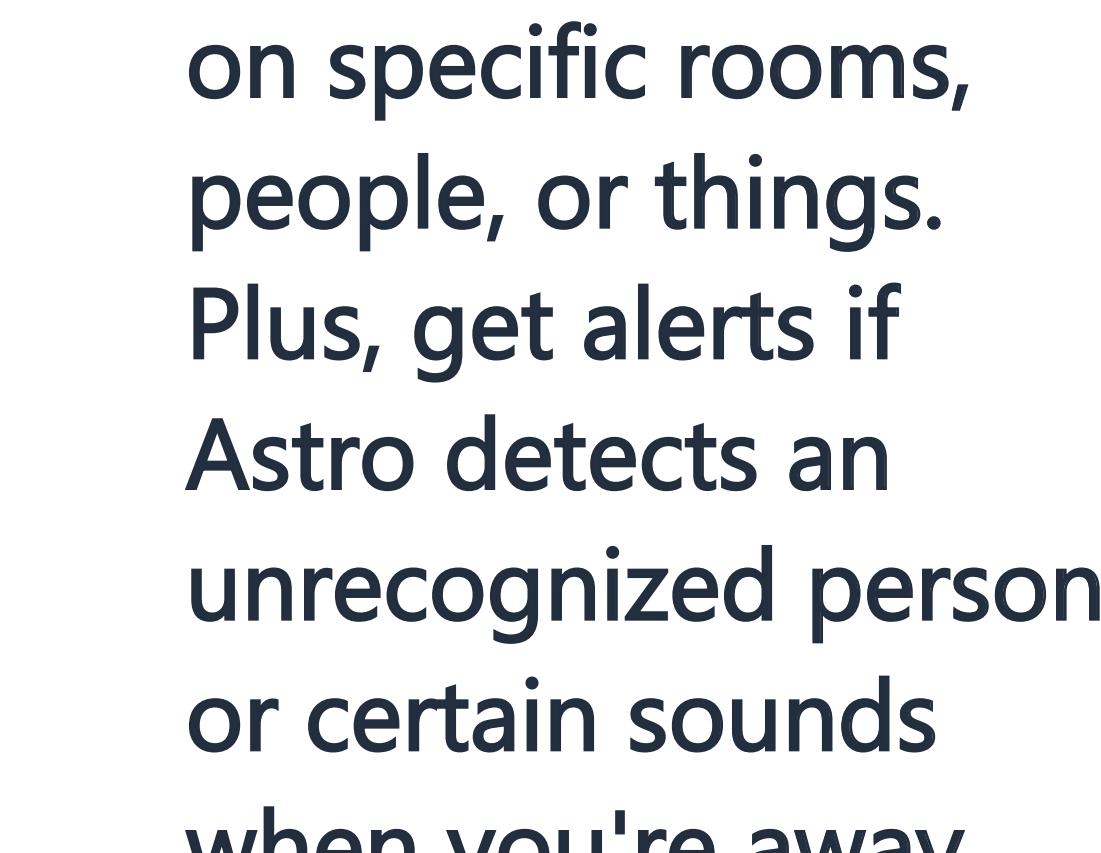

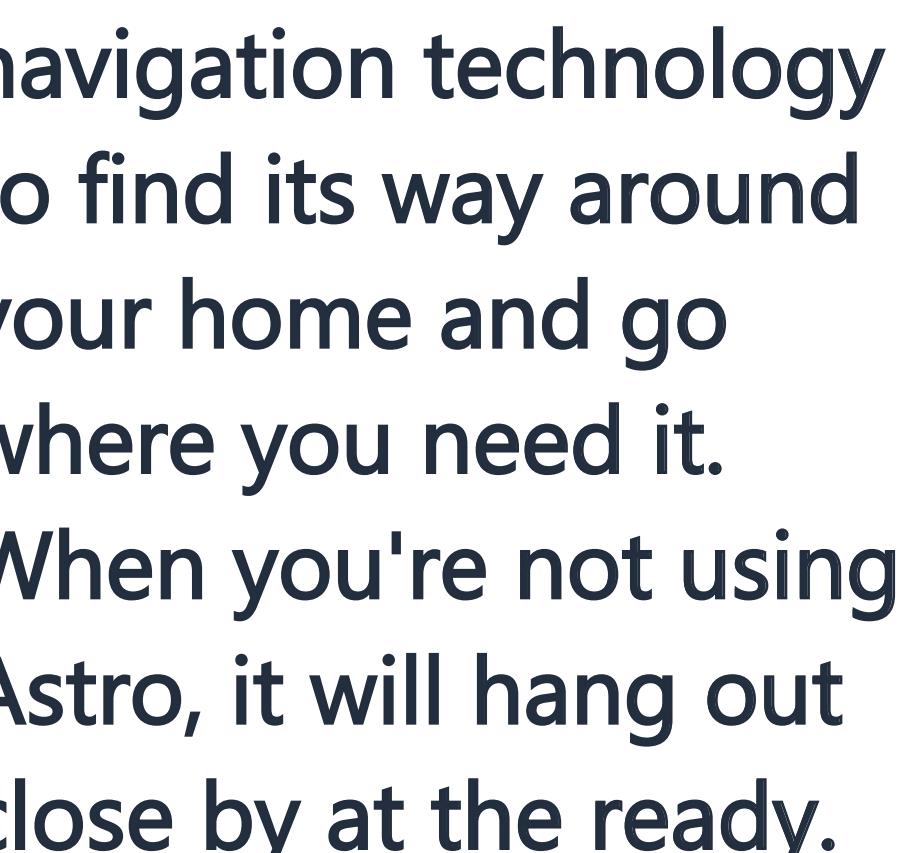

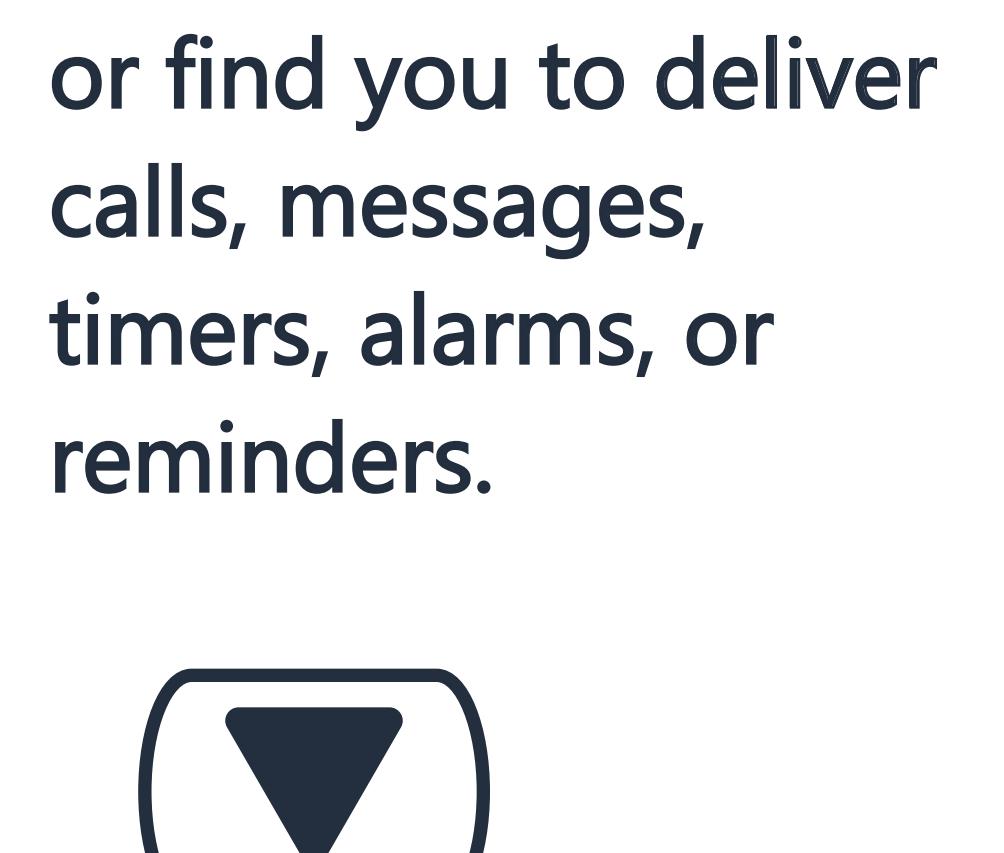

\$999<sup>99</sup>

Astro is equipped with a rotating screen that's mounted onto a base with wheels. Amazon designed the robot to appear animated and friendly, with eyes and expressive body movements that respond to user interaction.

The robot can move on its own from room to room and is capable of navigating around objects on the floor or braking to avoid colliding with obstacles such as a pet that moves into its path. A periscope camera attached to the base of the device can be raised or lowered to view objects that are high up.

## More About Astro

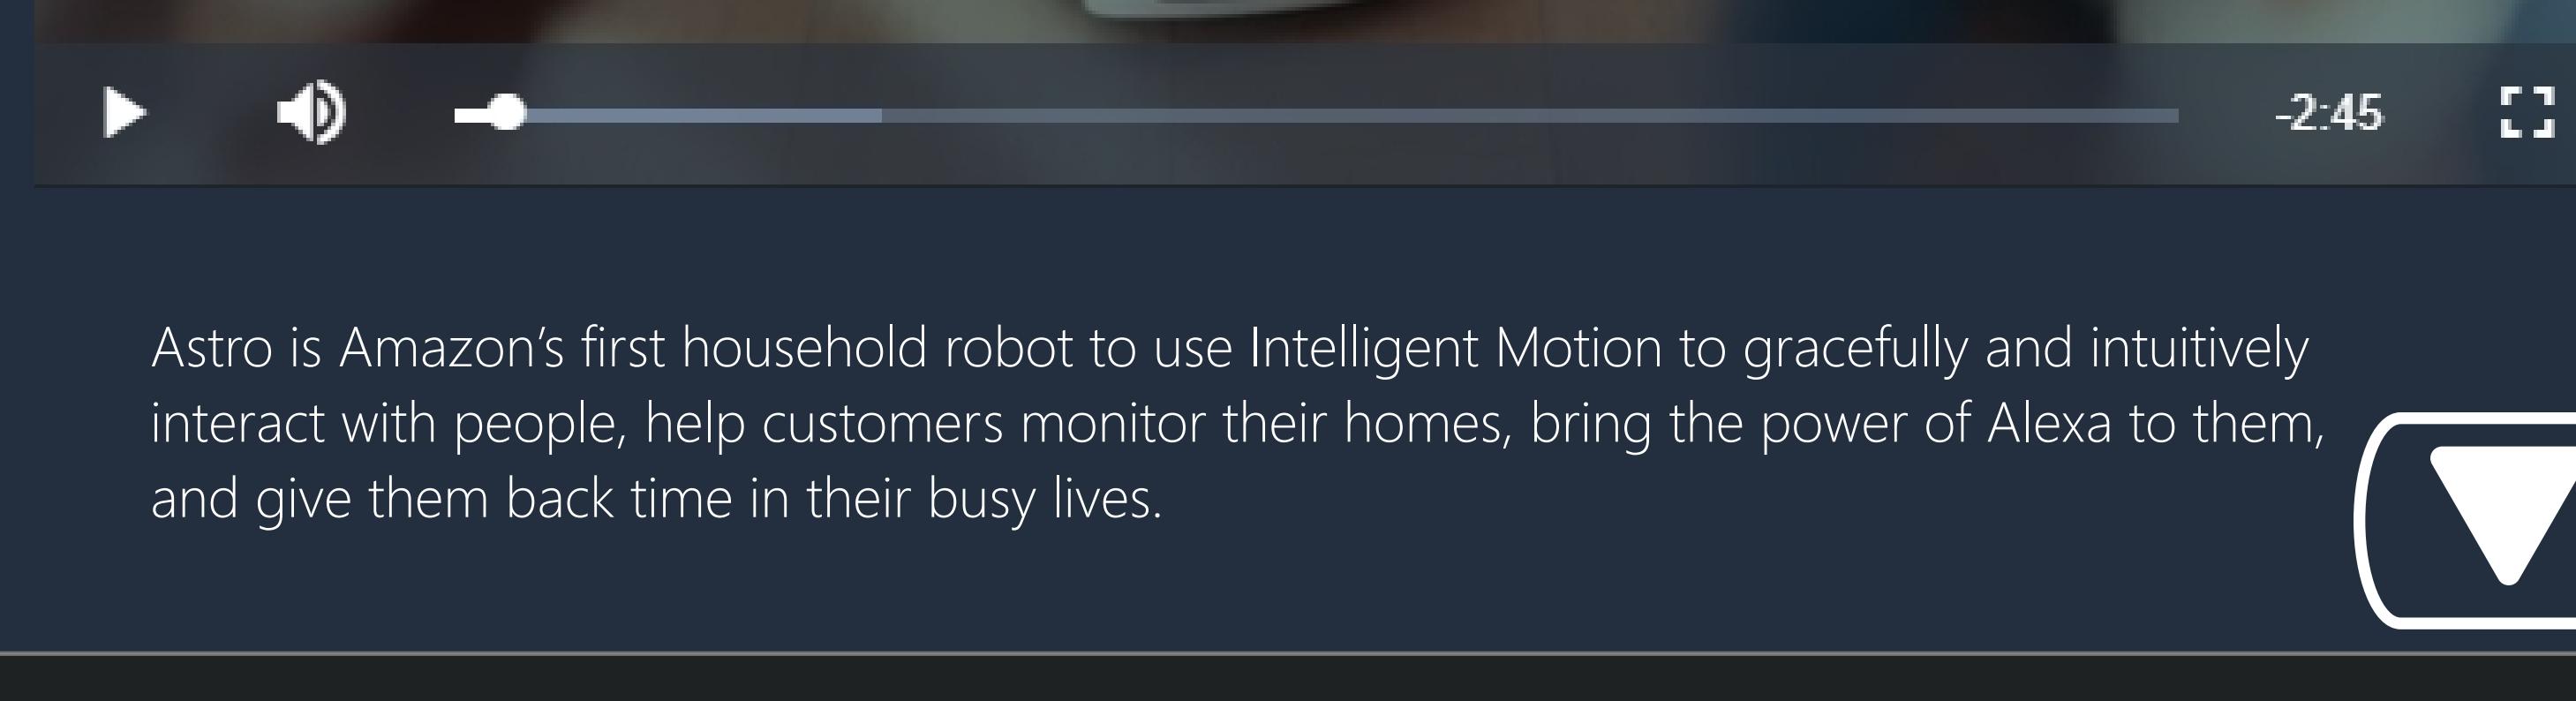

Put Alexa in motion - Astro can follow you with entertainment or find you to deliver calls, messages, timers, alarms, or reminders.

Introducing Intelligent Motion - Amazon Astro uses advanced navigation technology to find its way around your home and go where you need it. When you're not using Astro, it will hang out close by at the ready.

Stay connected from anywhere - Remotely send Astro to check on specific rooms, people, or things. Plus, get alerts if Astro detects an unrecognized person or certain sounds when you're away.

## Introducing Amazon Astro

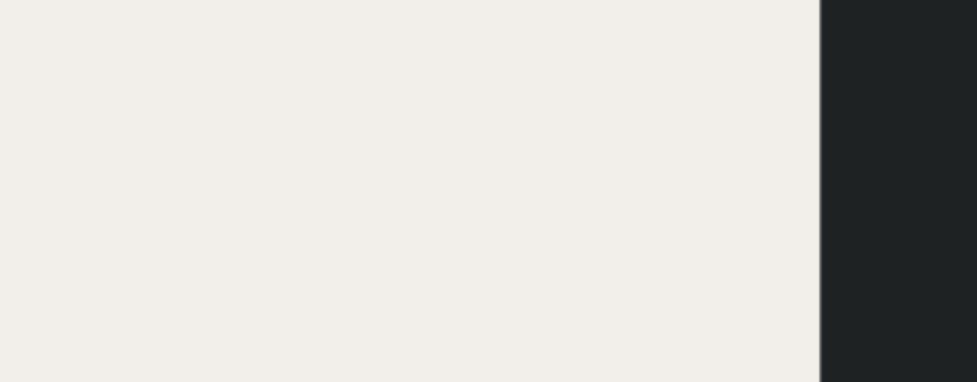

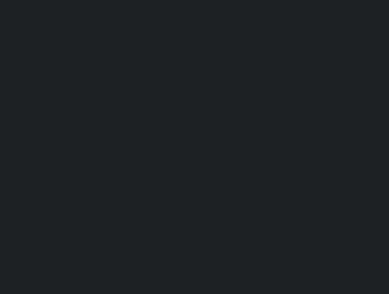

REPORT

-2:45

▶ ⏴ ⏵

Astro is Amazon's first household robot to use Intelligent Motion to gracefully and intuitively interact with people, help customers monitor their homes, bring the power of Alexa to them, and give them back time in their busy lives.
